

ENERGY OFF BUTTON

energy OFF
IMPACT ON!

an interactive system for energy conservation:

WHAT IS IT?

A big, visible "energy off" button in each classroom, that when pressed, turns off lights, the AC, and the projector. The button is also connected to a monthly leaderboard. The class that makes use of it the most will rank #1 on the leaderboard and win prizes.

The energy off button promotes energy efficiency by encouraging students to turn off unused energy.

The button raises awareness about energy consumption and its impact on climate change. It also encourages students to take action.

HOW DOES IT WORK?

- ★ Pressing the button turns off lights, the AC and projector.
- ★ Every time it is pressed, the event is logged online.
- ★ The class that makes use of it the most will rank #1 on the monthly leaderboard and win prizes.

WHY IS IT GREAT?

- ★ It teaches energy awareness through daily habit.
- ★ Makes conservation competitive and fun.
- ★ Saves energy and money
- ★ low cost

HOW DID I COME UP WITH IT?

I have often seen unused classrooms with lights left on, or the AC on when it's unneeded. I wanted to fix this in a fun way that is effective and raises awareness.
